Descriptive Overview

**Description**

- **Front View**
  - Microphone
  - Proximity sensor transmitters
  - Light sensor
  - LCD display with touch sensor
  - Proximity sensor receiver

- **Rear View**
  - 75 mm
  - 75 mm
  - Holes for installation onto electrical wall box
  - Hole for network connector
  - 4x VESA hole

- **Side View**
  - LED indicators
  - Ethernet cable bushing

- **Bottom View**
  - Speakers
  - Fixing screw
  - Ethernet cable bushing

**Connection**

- **Ethernet without PoE Infrastructure**
  - Ethernet cable
  - Power supply
  - PoE Adapter

- **Ethernet with PoE Infrastructure**
  - Ethernet cable
  - Ethernet with PoE

**System Default Setup**

When System Default button is pressed longer than 5 sec., the system default function is performed and setup is as follows:

- IP address: from DHCP (192.168.1.128 without DHCP)
- IP Mask: from DHCP (255.255.255.0 without DHCP)
- Password: Empty (no input required)

**Installation**

1. Loosen the fixing screw using delivered Allen key.
2. Remove front panel from back cover.
3. Install the cable so that it passes through the back cover hole.
   Fix back cover on the wall using appropriate screws depending on the wall material.
   Recommended cable length from the wall is 25 cm. Recommended height from the floor to the center of the panel is 150 cm.
4. Connect Ethernet cable to the panel and put the panel on the back cover.
5. Carefully tighten the fixing screw to fix panel on the back cover.

**User Manual**

Complete user manual can be downloaded here:
http://www.cuesystem.com/user_manuals.aspx

**Box Contents**

- Touch panel touchCUE-10-M incl. back cover
- Fixing screws & Allen key
- Cleaning tissue
- Ethernet cable
- Power supply with PoE injector incl. power cable
- Adhesive cover foil
- Adhesive tapes
- Squeegee
- Set of cable bushings
- Quick Start
- Declaration of Conformity & Warranty Conditions

Degrease (typically glass) surface with alcohol and let it dry. Sign top of foil in height 1,560 mm from the floor. It is for recommended height 1,500 mm from floor to center of the panel.

Partly remove protective film from adhesive foil and cut it.

Use vertical ruler or level to adjust correct foil vertical position. Put foil on the wall with the protective film (not with adhesive part) to the ruler or level.

Stick the adhesive part of foil using delivered squeegee.

Partially remove the protective film and stick the rest of the foil using a squeegee.

Squeegee lengthwise from the center outwards with overlapping strokes.

Loosen the fixing screw using delivered Allen key - 1 and remove back cover of the panel - 2, 3.

Position of back cover must be oriented as displayed above - cable bushings are left, right and bellow side oriented.

Degrease the back of the panel and attach two double-sided adhesive strips to the back of the panel. The strips should be located along the top and bottom edge of the back panel.

Degrease foil installed on the wall and left it completely dry. Remove protective film from the adhesive tape (installed on the rear side of the back cover) and carefully attach it on the foil installed on the wall.

Install cable to the selected bushing and install appropriate cable cover. Cable length inside is 25 cm. Covers for flat and round cables as well as for unused bushings are delivered. Covers are fixed with adhesive tape.

Connect Ethernet cable to the panel and put the panel on the back cover - 1, 3. Carefully tighten the fixing screw to fix panel on the back cover - 3.
